

Platform

The central archive of the clinic, doctor's personal office and the system of administrative management of key processes

Central archive of the clinic

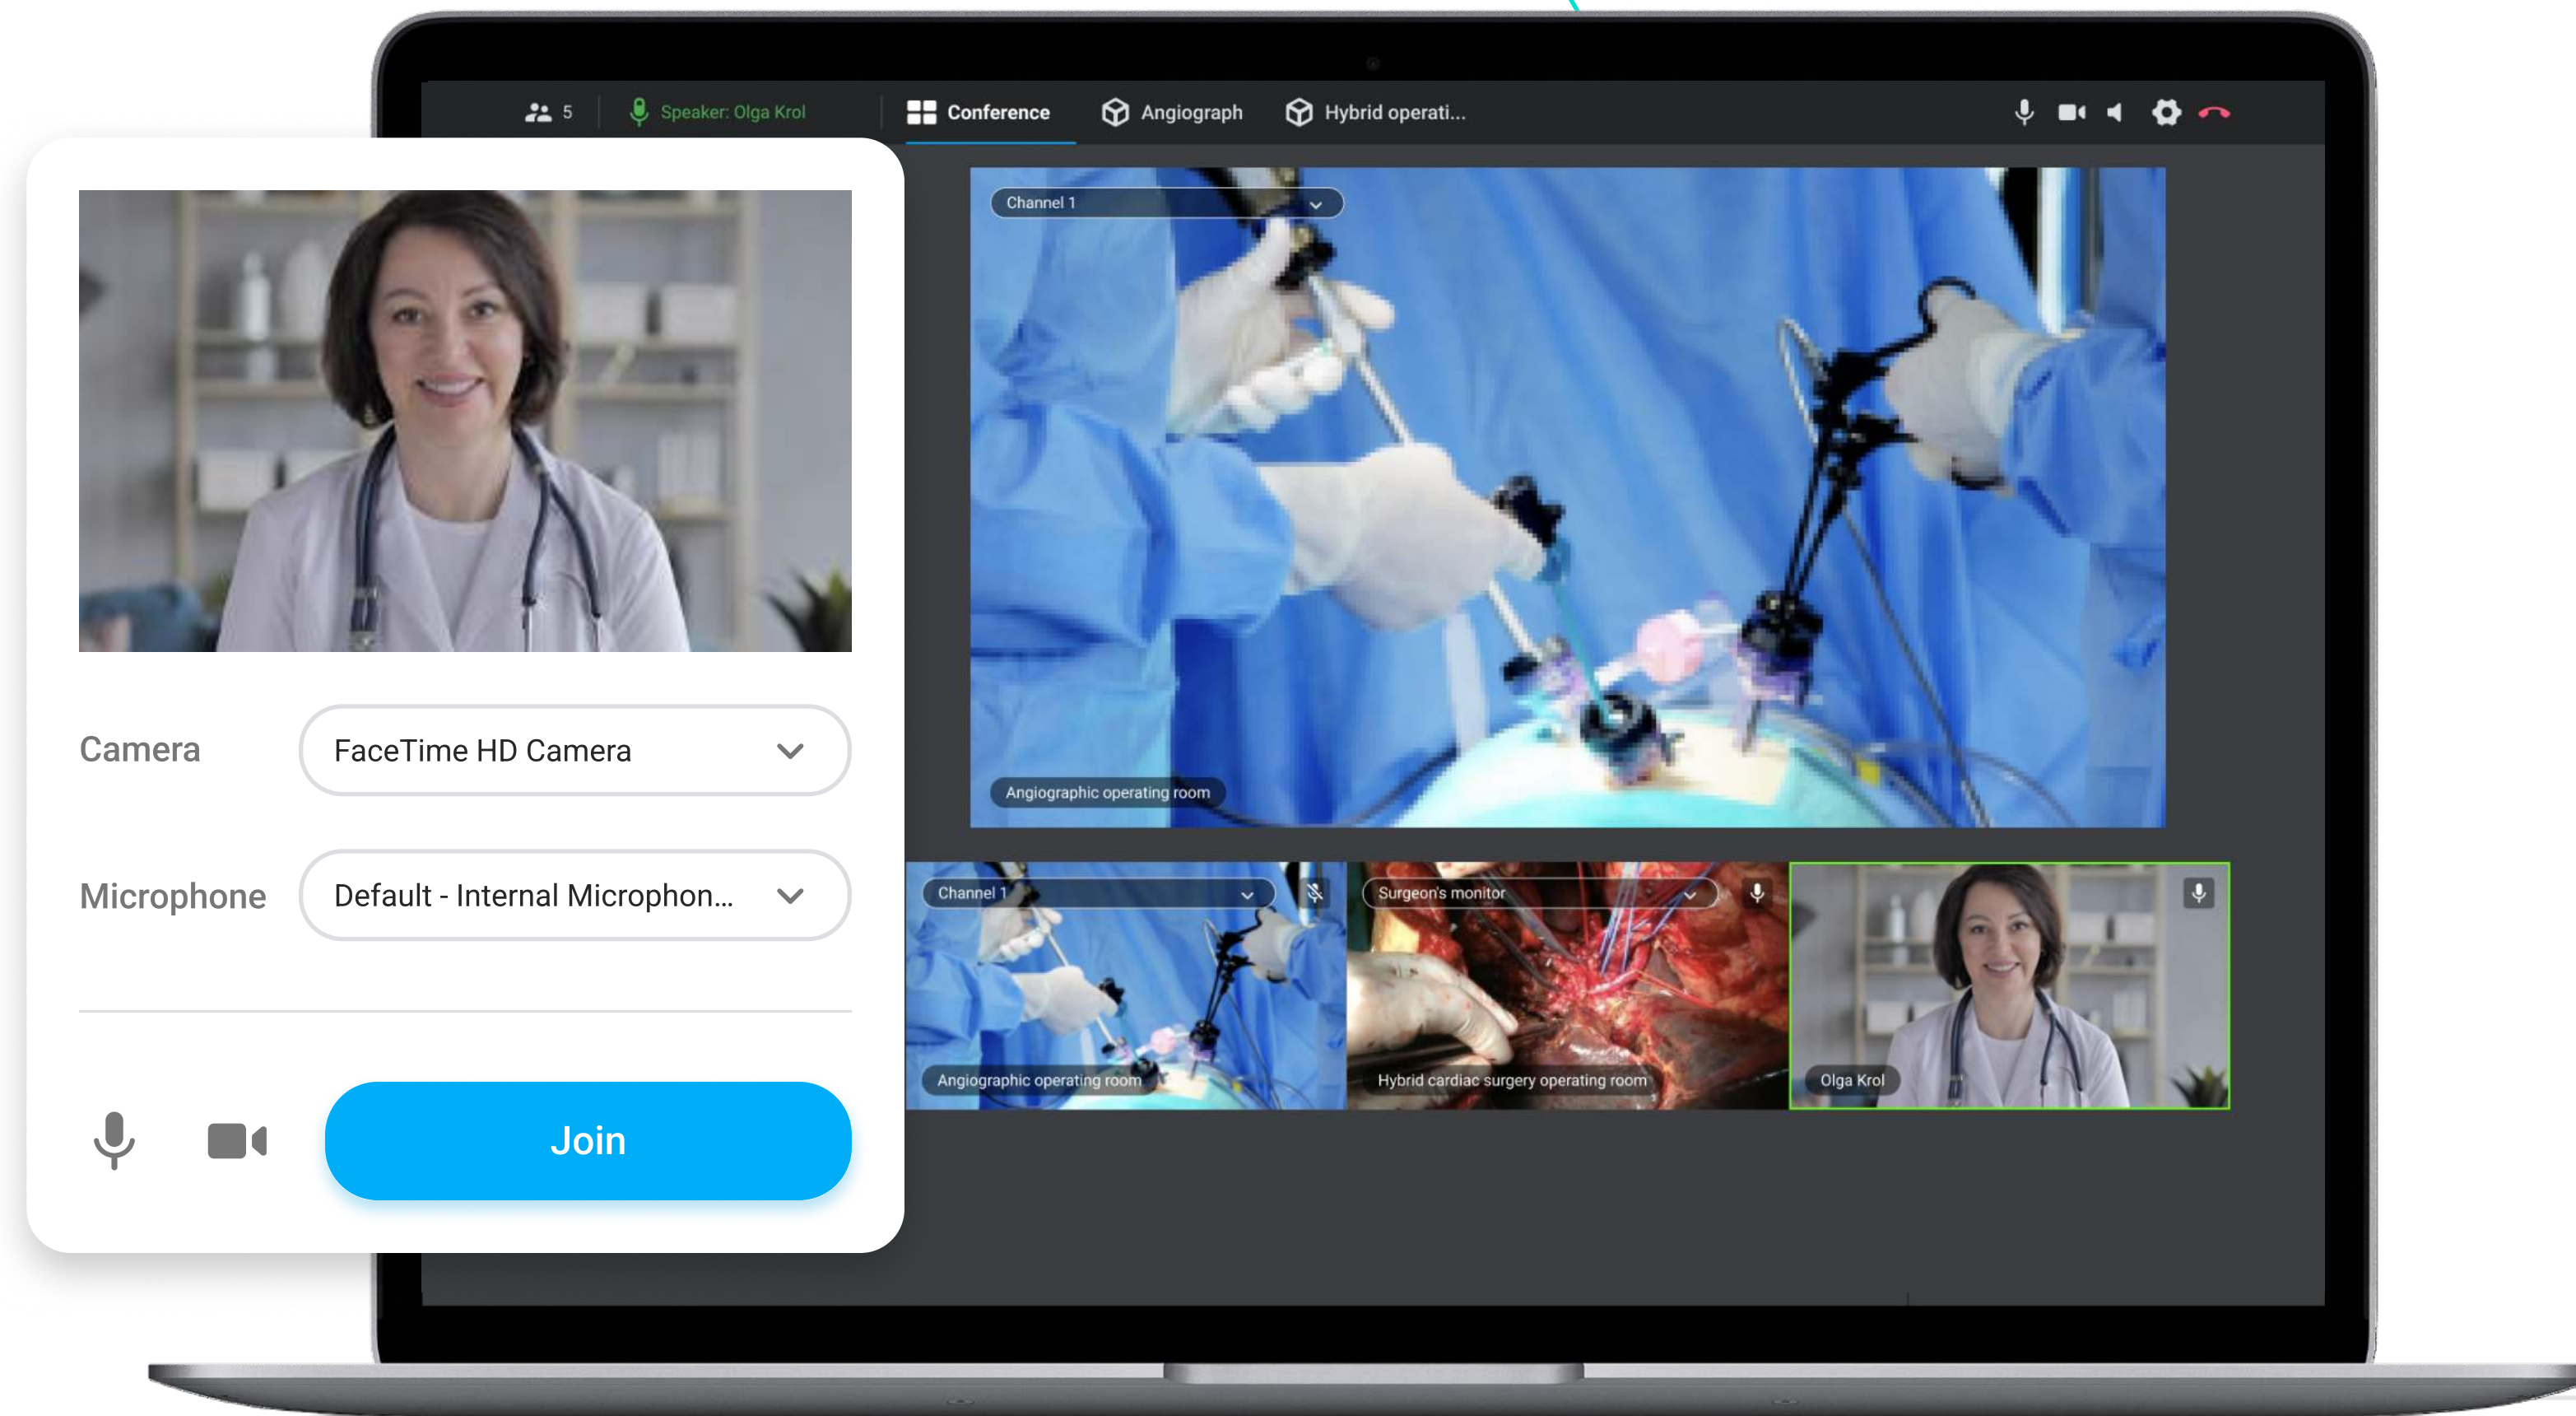

- Secure access to the archive from the browser
- Simultaneous playback of up to 4 video streams
- Markup tools and Operation editor
- Direct export from the hospital's local secure network to the Medikt public cloud

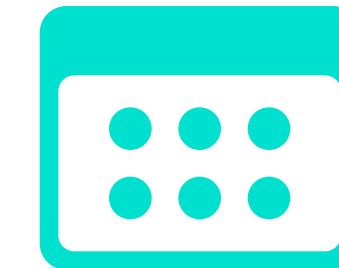

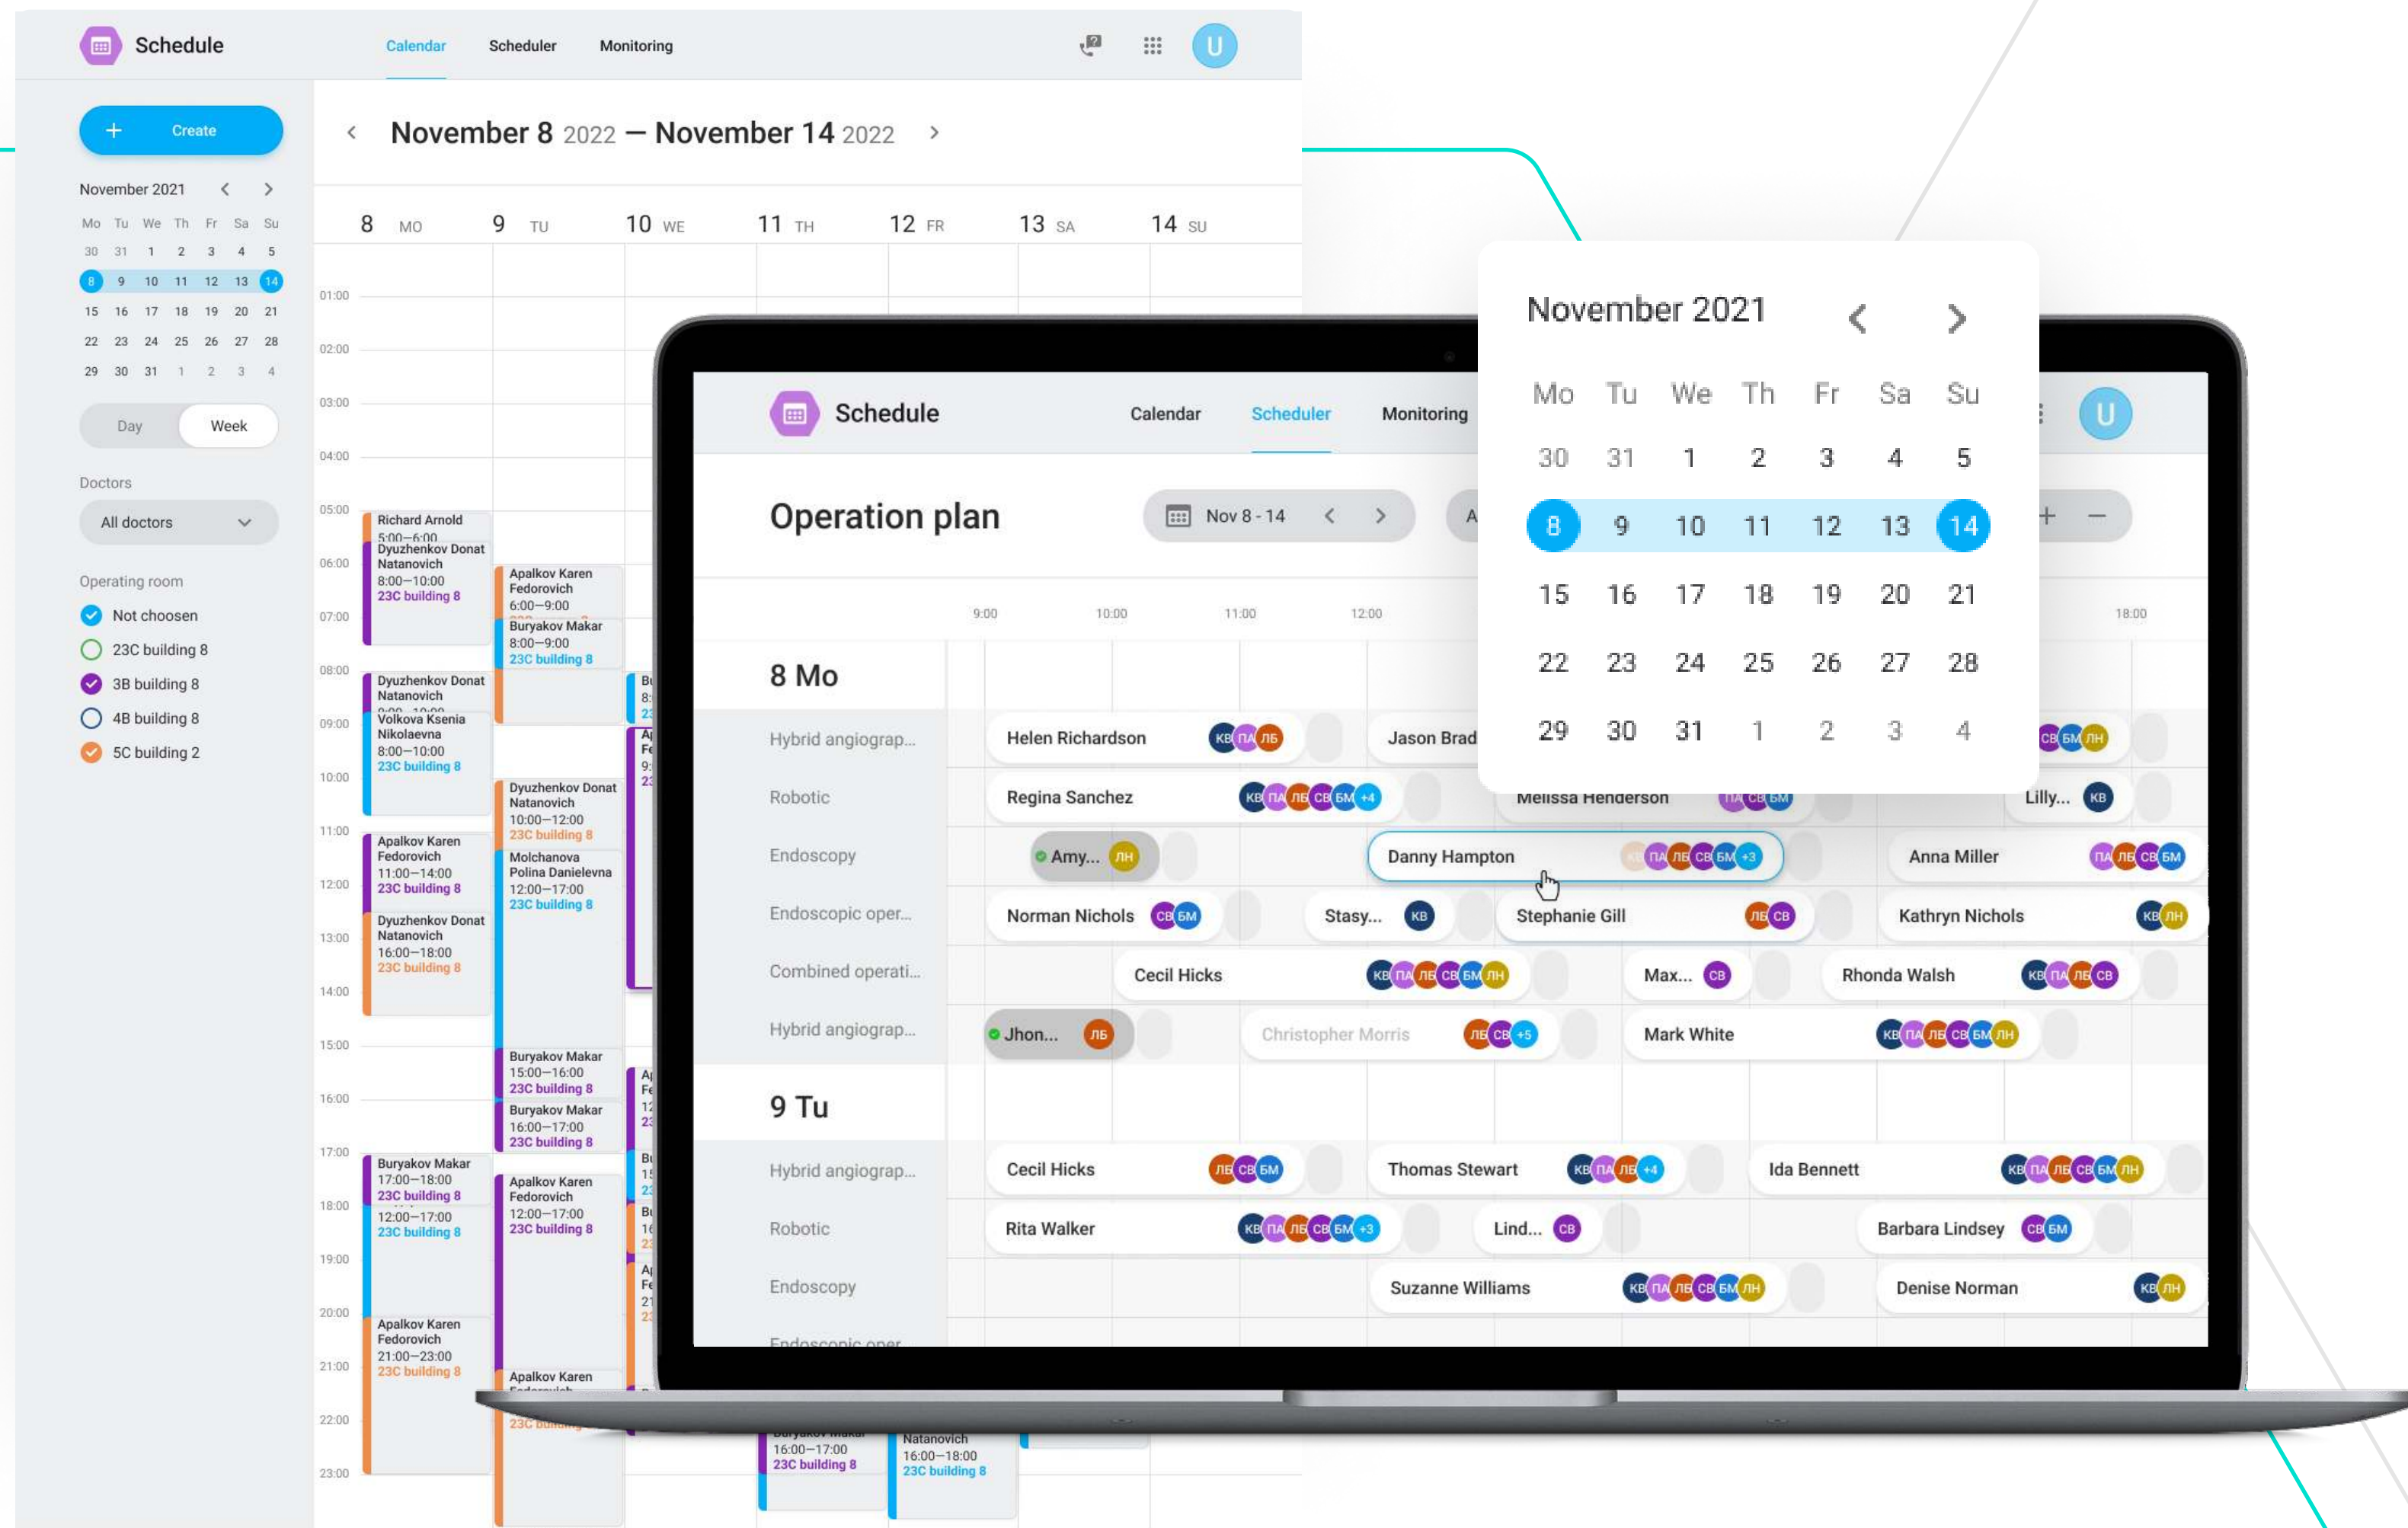

The screenshot displays a web-based interface for a surgical archive. At the top, a navigation bar includes 'Surgical unit', 'Current', 'Archive', and 'Downloads'. Below this, the video title 'Buryakov Makar Akimovich 47 years old Robot-assisted prostatectomy' is shown, along with a 'Download' button and icons for document, edit, and delete. The main content area features a video player showing a surgical procedure. The video player includes a progress bar at 0:02:34 / 0:52:03 and playback controls. To the right of the video player is a 'Sources' section with thumbnails for 'Channel 4K' and 'Channel 1', and a 'Doctors' section with a profile for 'SF Shursha Feodosii Tikhonovi...'. The video player also shows a timestamp of 00:00:00 and 'Endoscope 4K'.

Telemedicine

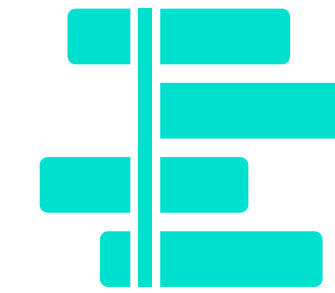

- Live video streams from operating rooms
- Two-way video communication with the operating room
- Stream of all active video sources is available to participants of the conference
- Invitations to participants via secure external links
- Recording sessions together with the operation

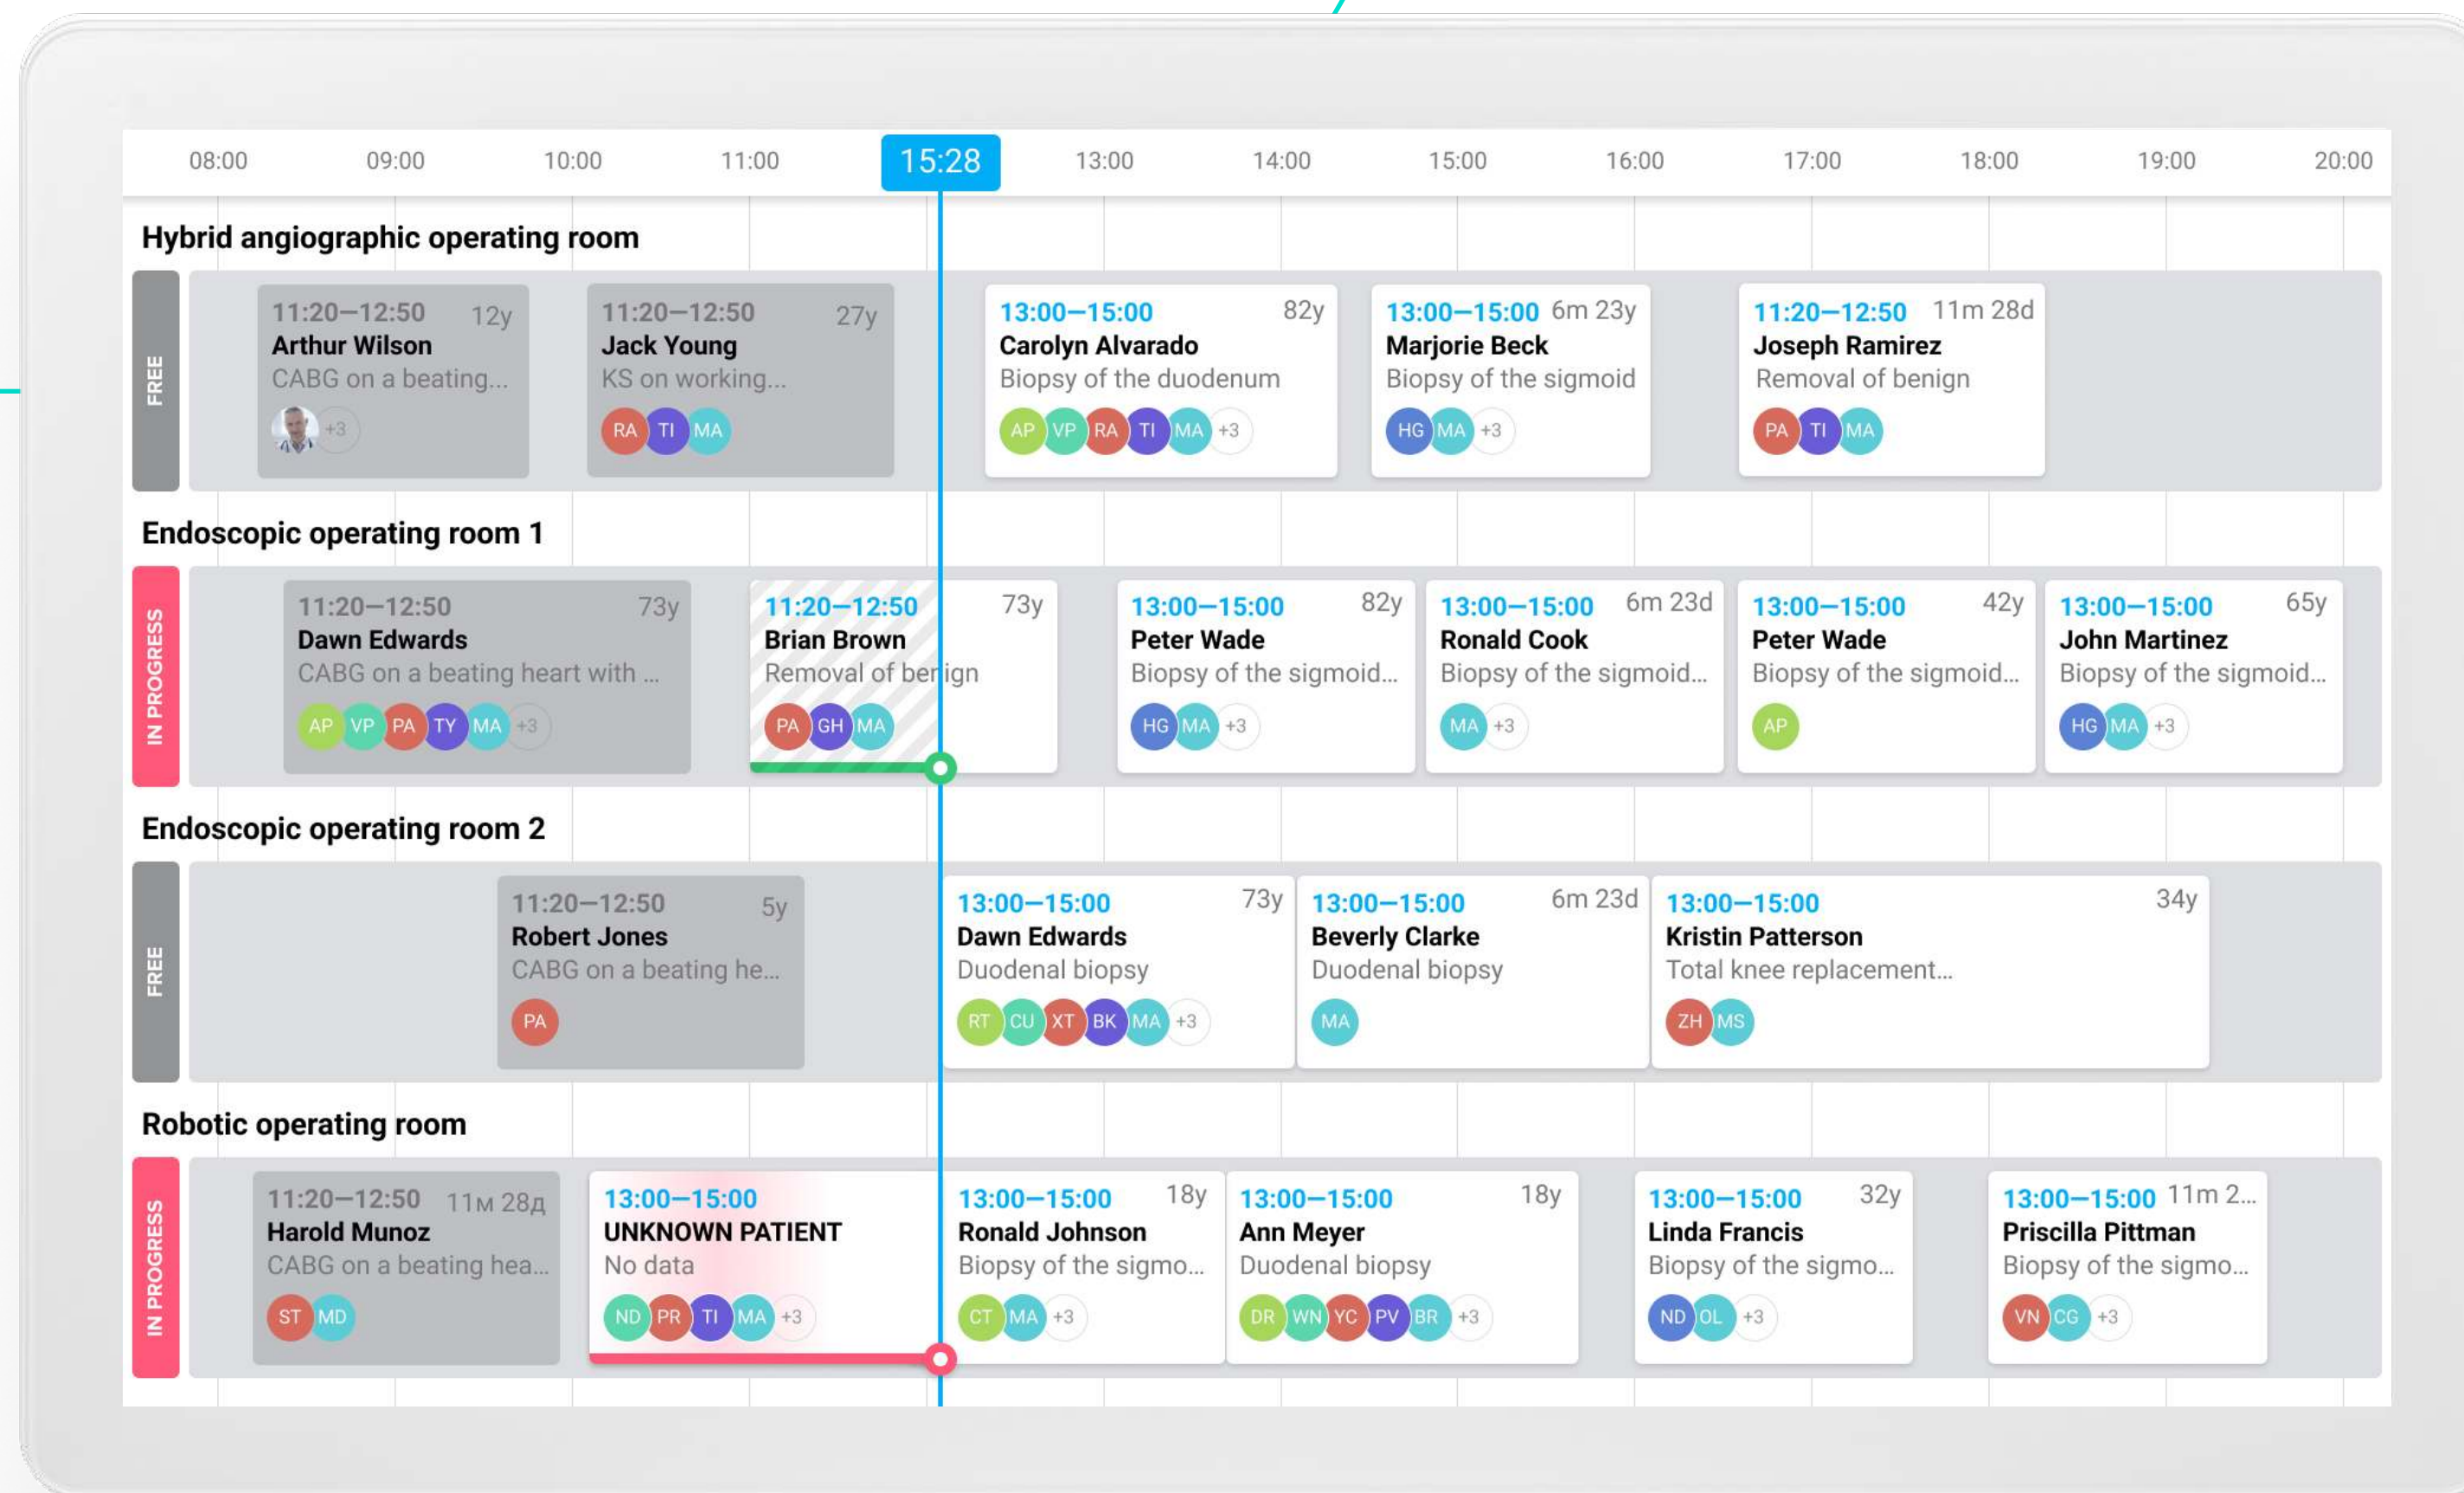

Planning and monitoring

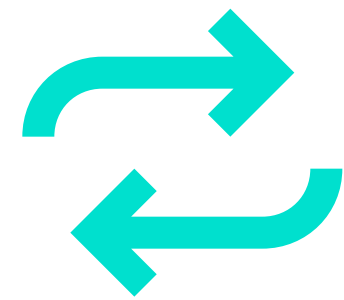

Planning tools are adapted to the processes of the operating unit

Operational day monitoring

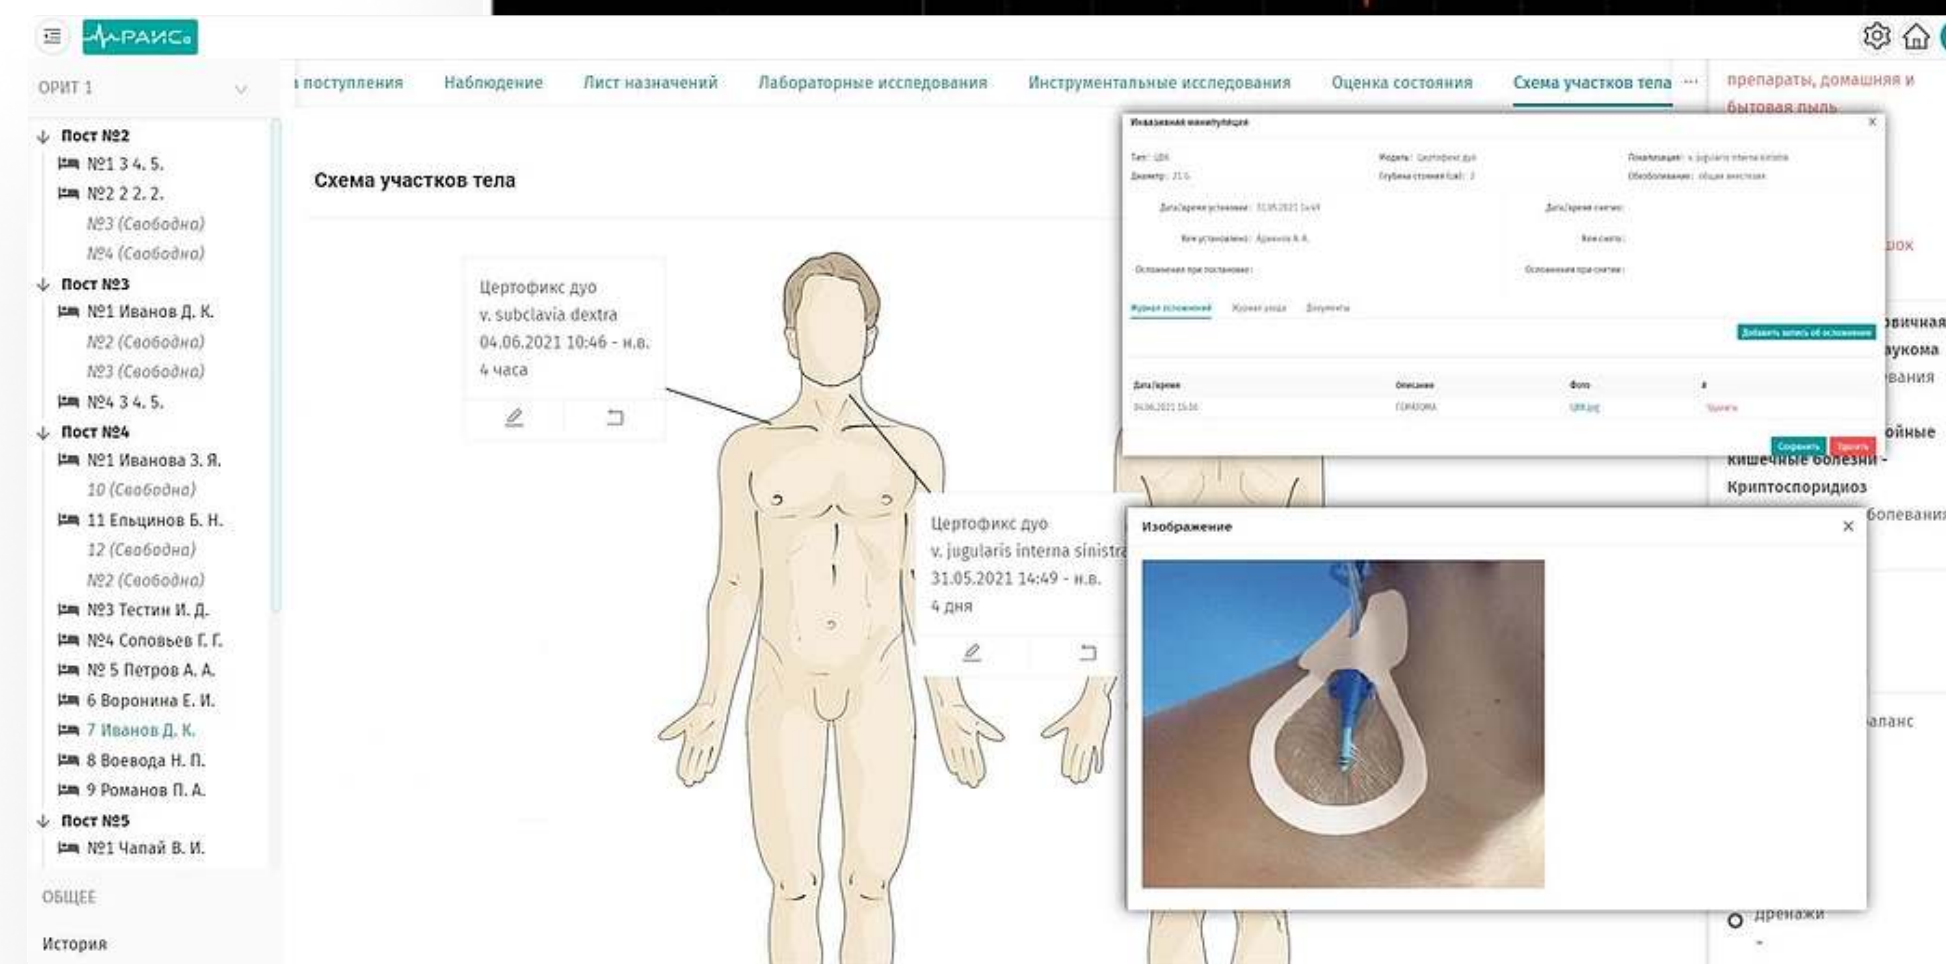

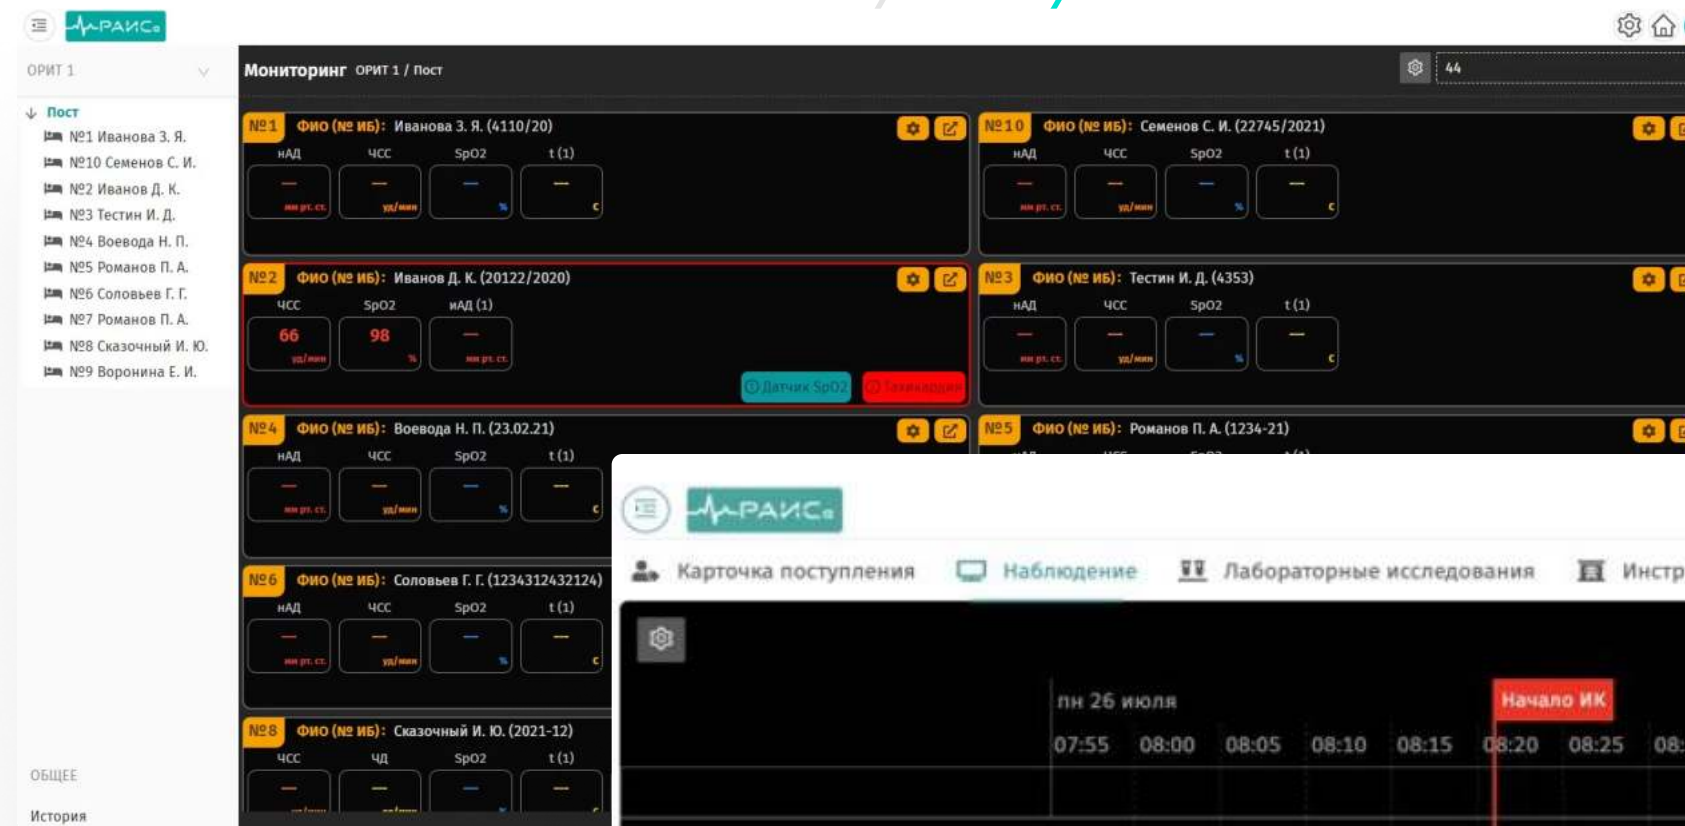

Displaying the progress of operations for the current day, forecasting shifts in planned operations

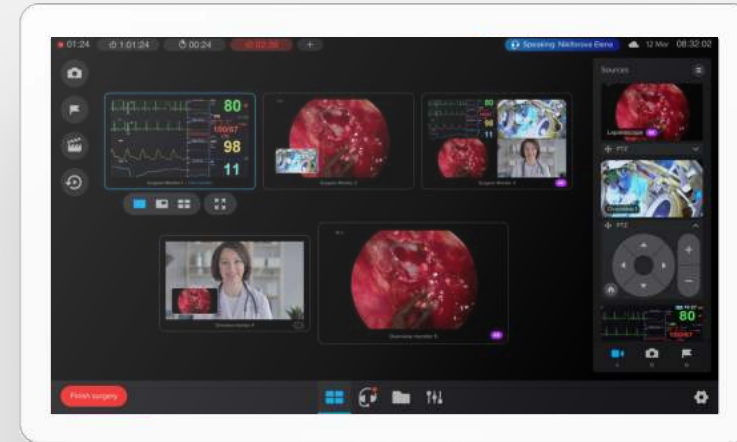

Integration with IT systems

Data exchange with HIS, PACS, and other information systems via HL7, DICOM, FHIR protocols
